VOLUME 5 AIRMAN CERTIFICATION

CHAPTER 2 TITLE 14 CFR PART 61 CERTIFICATION OF PILOTS AND FLIGHT INSTRUCTORS

Section 9 Conduct an Instrument Rating Certification

Source Basis:

- **Title 14 CFR Part 3 Subpart C, Designated U.S. Agents for Service.**
- **Title 14 CFR § 61.23, Medical Certificates: Requirement and Duration.**
- **Title 14 CFR § 61.39, Prerequisites for Practical Tests.**
- **Title 14 CFR § 61.43, Practical Tests: General Procedures.**
- **Title 14 CFR § 61.45, Practical Tests: Required Aircraft and Equipment.**
- **Title 14 CFR § 61.49, Retesting After Failure.**
- **Title 14 CFR § 61.51, Pilot Logbooks.**
- **Title 14 CFR § 61.64, Use of a Flight Simulator and Flight Training Device.**
- **Title 14 CFR § 61.65, Instrument Rating Requirements.**
- **Title 14 CFR § 61.71, Graduates of an Approved Training Program Other Than Under This Part: Special Rules.**
- **Title 14 CFR Part 141 Appendix C, Instrument Rating Course.**
- **Title 14 CFR Part 141 Appendix M, Combined Private Pilot Certification and Instrument Rating Course.**

5-431 REPORTING SYSTEM(S). Aviation safety inspector (ASI) evaluators will use Safety Assurance System (SAS) Activity Recording (AR) and use activity code 1506, as applicable.

5-432 OBJECTIVE. The objective of this task is to determine if the applicant meets the requirements for an instrument rating under Title 14 of the Code of Federal Regulations (14 CFR) § 61.65. Successful completion of this task results in the issuance of Federal Aviation Administration (FAA) Form 8060-4, Temporary Airman Certificate (with an instrument rating); FAA Form 8060-5, Notice of Disapproval of Application; or a Letter of Discontinuance.

> NOTE: As implementation of the Airman Certification Standards (ACS) expands, the term "certification test" may be used in certain situations because it more fully aligns with the integrated ACS approach to training and testing for airman certification purposes. The terms "practical test" and "certification test" are synonymous for the purposes of this guidance.

5-433 GENERAL.

A. Instrument Rating. The instrument rating requires applicants to receive training in precision and nonprecision approaches. Due to certain instrument approach facilities not being available in some areas, the certification, training, and recency-of-experience requirements do not specifically outline what the precision and nonprecision approaches should be. However, it is expected that instructors provide training to their students on all precision and nonprecision approaches that are readily available in the area. The content of the practical test is dependent on the equipment installed in the aircraft and approach facilities that are available in the nearby area.

The practical test of 14 CFR § 61.65 and the instrument proficiency check (IPC) of 14 CFR § 61.57 require that an applicant be tested on precision and nonprecision approaches.

1) **Airline Transport Pilot Certificate (ATPC).** An instrument rating may be added to an ATPC if it is associated with a category/class rating held at the commercial or private pilot level (e.g., AIRLINE TRANSPORT PILOT, AIRPLANE SINGLE AND MULTIENGINE LAND, COMMERCIAL PRIVILEGES ROTORCRAFT—HELICOPTER, and INSTRUMENT—HELICOPTER).

2) **Knowledge Test.** The applicant must satisfactorily complete the instrument knowledge test for the category of aircraft to be used for the practical test (airplane, powered-lift, or helicopter). An applicant for the instrument rating knowledge test must have received "a logbook or training record endorsement from an authorized instructor certifying that the person is prepared to take the required knowledge test" (refer to 14 CFR § 61.65(a)(4)). Therefore, the knowledge test results report alone is not acceptable as meeting the requirements of 14 CFR § 61.65(a)(4) for the logbook or training record endorsement. An additional knowledge test is not required if the applicant already holds an unrestricted instrument rating on a U.S. pilot certificate. The knowledge test results for an ATPC are not acceptable as evidence of aeronautical knowledge for an instrument rating.

3) **Practical Test.** The Instrument Rating ACS or practical test standards (PTS), as appropriate, requires an applicant to be tested on three different kinds of instrument approaches, consisting of one precision approach and two nonprecision approaches.

a) Precision Approaches. The applicant must accomplish a precision approach to the decision altitude (DA) using aircraft navigational equipment for centerline and vertical guidance in simulated or actual instrument meteorological conditions (IMC). A precision approach is a standard instrument approach procedure (IAP) to a published DA using provided approved vertical guidance. The evaluator has discretion to have the applicant perform a landing or a missed approach at the completion of each approach.

b) Nonprecision Approaches. The evaluator will select nonprecision approaches representative of the type that the applicant is likely to use. A nonprecision approach is a standard IAP to a published minimum descent altitude (MDA) without approved vertical guidance. Navigation systems that display advisory vertical guidance during nonprecision approach operations may be used without restriction. The evaluator will select, and the applicant must accomplish, at least two different nonprecision approaches in simulated or actual IMC. The evaluator has discretion to have the applicant perform a landing or a missed approach at the completion of each approach. Specific requirements for examining IAPs during a practical test are contained within the applicable ACS/PTS.

c) Radio Equipment Requirements. The required radio equipment that must be installed and operational on the aircraft must provide for communications with air traffic control (ATC) and for the performance of the required nonprecision approaches and precision approaches.

d) Global Positioning System (GPS) Testing. If the practical test is conducted in the aircraft and the aircraft has an operable and properly installed GPS, the evaluator will require and the applicant must demonstrate GPS approach proficiency. If the applicant has contracted for training in an approved course that includes GPS training in the system that is installed in the aircraft/simulator/flight training device (FTD), and the aircraft/simulator/FTD used for the checking/testing has the same system properly installed and operable, the applicant must demonstrate GPS approach proficiency.

NOTE: If any avionics/navigation unit, including GPS, in the aircraft used for the practical test is placarded inoperative, the evaluator will review the maintenance log to verify that the discrepancy has been properly documented.

B. Limitations.

1) Multiengine Limited to Visual Flight Rules (VFR) Only. If an applicant holds both single-engine and multiengine class ratings on a pilot certificate and takes the instrument rating practical test in a single-engine airplane, the certificate issued must bear the limitation "MULTIENGINE LIMITED TO VFR ONLY." If the applicant takes the test in a multiengine airplane, the instrument privileges will be automatically conferred for the Airplane Single Engine (ASE) rating.

2) Limited to Center Thrust. An applicant may accomplish an Instrument—Airplane rating practical test in a multiengine airplane that is limited to center thrust. There is no need to place the "LIMITED TO CENTER THRUST" limitation on the applicant's pilot certificate provided the Airplane Multiengine Land (AMEL) rating is not limited to center thrust. If the applicant's AMEL rating is limited to center thrust, then the limitation will already be on the pilot certificate.

5-434 ESTABLISHING ELIGIBILITY.

A. General Eligibility. The applicant for an instrument rating must meet all the applicable requirements of 14 CFR § 61.65 and hold at least a Private Pilot Certificate and a current third-class medical certificate or, if operating under BasicMed in lieu of possessing a valid third-class medical certificate, a valid U.S. driver's license as well as a current Certificate of Completion from an authorized BasicMed medical education course.

B. Clarification of Different Kinds of Approaches. Title 14 CFR § 61.65(d) contains the aeronautical experience requirements for a person applying for an Instrument—Airplane rating. Title 14 CFR § 61.65(d)(2)(ii)(C) states, in relevant part, that an applicant must complete 40 hours of actual or simulated instrument time that includes at least one cross-country flight that is performed under instrument flight rules (IFR) and involves "three different kinds of approaches with the use of navigation systems." The FAA previously issued legal interpretations indicating that the three different kinds of approaches must utilize three different kinds of navigation systems. The FAA has since rescinded the legal interpretations. To fulfill the regulatory requirements, an applicant only needs to conduct three different kinds of approaches regardless of the navigation system utilized. Different approaches can be defined by the various lines of minima found on an approach plate. For example, Localizer (LOC) minima are one kind of approach operation and instrument landing system (ILS) minima are another kind of approach operation. The same could be true of Area Navigation (RNAV) GPS-titled approach plates; a localizer performance with vertical guidance (LPV) approach is one kind of approach operation and a Localizer Performance (LP) to a circling MDA is another kind of approach operation. Subparagraph 5-433A3) above discusses the types of approaches. This paragraph also applies to 14 CFR § 61.65(e)(2) and (f)(2).

NOTE: Precision approach radar (PAR) and airport surveillance radar (ASR) approaches can be used to meet the requirements of 14 CFR § 61.65(d)(2), (e)(2), and (f)(2).

C. Graduate of an Approved School. If an applicant graduated from an approved school, the applicant is considered to meet the knowledge and experience requirements of 14 CFR § 61.65. If an applicant graduated from an FAA-approved pilot school within 60 days before application, 14 CFR § 61.71(a) requires the applicant to present an appropriate graduation certificate. Otherwise, the applicant must meet the requirements of 14 CFR § 61.65.

D. Graduate of an Approved School With Examining Authority. If an applicant graduated from an FAA-approved school with examining authority within 60 days before applying, 14 CFR § 61.71(a) requires the applicant to present an appropriate graduation certificate. Otherwise, the applicant must meet the requirements of 14 CFR § 61.65.

E. Not a Graduate of an Approved School. If an applicant is not a graduate of an FAA-approved school, establish the applicant's flight experience in accordance with 14 CFR § 61.65. Official military pilot flight time records are acceptable toward meeting the requirements of 14 CFR § 61.65.

F. Agent for Service. Applicants with a foreign address for official record purposes must comply with the U.S. agent for service requirements in 14 CFR part 3 subpart C, which require any individual who has a foreign address and no U.S. physical address of record on file with the FAA to designate a U.S. agent for service if they apply for a certificate, rating, or authorization issued under 14 CFR part 47, 61, 63, 65, 67, or 107 or hold a certificate, rating, or authorization issued under any of these parts. To designate a U.S. agent for service, applicants should refer to Advisory Circular (AC) 3-1, U.S. Agents for Service on Individuals with Foreign Addresses Who Hold or Apply for Certain Certificates, Ratings, or Authorizations.

G. English Language Requirements. An applicant must be able to read, speak, write, and understand the English language. Early in the certification process, the evaluator must determine whether the applicant can meet this requirement. Volume 5, Chapter 14, Section 1 provides expanded guidance on how to determine English language abilities required for pilot certification. If there is any question as to whether the applicant can read, speak, write, or understand the English language, then the evaluator must not issue the certificate; and in the case where an evaluator is not an inspector, they will refer the individual to the Flight Standards office for aviation English language determination and indicate this by checking the appropriate box on page 2 of FAA Form 8710-1, Airman Certificate and/or Rating Application, or FAA Form 8400-3, Application for an Airman Certificate and/or Rating, as appropriate. See

Volume 5, Chapter 14, Section 1 for additional information on the FAA English language standard for certification.

H. Logbook Endorsements.

1) In accordance with 14 CFR § 61.39(a)(6), the applicant's logbook or training record must contain an endorsement from an authorized instructor who certifies that the applicant is prepared for the required practical test and has demonstrated satisfactory knowledge of the subject areas in which the applicant was deficient on the airman knowledge test received.

2) The applicant's logbook or training record must contain an endorsement from an authorized instructor who certifies that the applicant has received and logged 3 hours of instrument training within the 2 calendar months preceding the date of the application in preparation for the practical test.

3) The applicant's logbook or training record must contain an endorsement from an authorized instructor who states that the applicant has demonstrated satisfactory knowledge of the subject areas in which the applicant was deficient on the airman knowledge test.

4) The applicant must have logged training and received a logbook endorsement from an authorized instructor on the training required by 14 CFR § 61.65(c) that is appropriate for the instrument rating sought.

5) The applicant's logbook or training record must contain an endorsement from an authorized instructor who certifies that the applicant is prepared to pass the practical test. In addition, the applicant must have a signed FAA Form 8710-1.

5-435 TYPES OF INSTRUMENT RATINGS.

A. Instrument Ratings and Associated Aircraft Ratings.

- Instrument—Airplane.
- Instrument—Helicopter.
- Instrument—Powered-Lift.

B. Requirements. An Instrument—Airplane rating is issued to an applicant who qualifies for an instrument rating in an airplane. An Instrument—Helicopter rating is issued to an applicant who qualifies for an instrument rating in a helicopter. An Instrument—Powered-Lift rating is issued to an applicant who qualifies for an instrument rating in a powered-lift. A person who already holds an instrument rating in one category of aircraft and is applying for an additional instrument rating in another category of aircraft need only obtain the appropriate aeronautical experience, training, and endorsements, and pass the appropriate practical test, but does not need to take an additional knowledge test.

5-436 AIRCRAFT AND EQUIPMENT REQUIREMENTS. Title 14 CFR § 61.45 prescribes the required aircraft and equipment for a practical test. The regulation states the minimum aircraft registration and airworthiness requirements as well as the minimum equipment requirements, to include the minimum required controls. Consistent with 14 CFR § 61.45(b) and (d), the aircraft must have:

- The flight instruments necessary for controlling the aircraft without outside references,
- The radio equipment required for ATC communications,
- The ability to perform IAPs, and
- GPS equipment must be instrument certified and contain the current database, if installed.

5-437 INSTRUMENT FLIGHT INSTRUCTION OR PRACTICAL TESTS INVOLVING SIMULATED INSTRUMENT FLIGHT. Title 14 CFR § 91.109(c)(2) requires a third-person observer whenever the safety pilot determines that vision is inadequate. The rule requires that a competent observer who adequately supplements the safety pilot's forward and side vision be in the aircraft during simulated instrument flight when the safety pilot does not have adequate vision forward and to each side of the aircraft. Evaluators should ensure that the subject of adequate vision, as it relates to instrument instruction, is discussed with flight instructors. It must be made clear that the most diligent and expert scanning by the instructor pilot is imperative, since the instructor pilot is normally the person aboard the aircraft best able to see and avoid other aircraft.

5-438 REQUIRED INSTRUMENT APPROACHES. Title 14 CFR § 61.65(a)(8) requires an applicant for an instrument rating to pass a practical test on Instrument Flight Procedures (IFP). The Instrument Rating ACS or PTS, as appropriate, requires the applicant to demonstrate the ability to perform the IFR operations required by 14 CFR § 61.65(c).

5-439 USE OF AIRCRAFT NOT APPROVED FOR IFR OPERATIONS UNDER ITS TYPE CERTIFICATE (TC) FOR INSTRUMENT TRAINING AND/OR AIRMAN CERTIFICATION TESTING. The following paragraphs are intended to clarify the use of an aircraft not approved for IFR operations under its TC for instrument flight training and/or airman certification testing.

A. IFR Training in Visual Meteorological Conditions (VMC). Instrument flight training may be conducted during VMC in any aircraft that meets the equipment requirements of 14 CFR §§ 91.109 and 91.205, and, for an airplane operated in controlled airspace under the IFR system, 14 CFR §§ 91.411 and 91.413. An aircraft may be operated on an IFR flight plan under IFR in VMC, provided the pilot in command (PIC) is properly certificated to operate the aircraft under IFR. However, if the aircraft is not approved for IFR operations under its TC, or if the appropriate instruments and equipment are not installed or are not operative, operations in IMC are prohibited.

B. TC Data. Appropriate TC data will indicate whether the aircraft meets the requirements for IFR operations.

1) Title 14 CFR § 91.9(a) prohibits aircraft operations without compliance with the operating limitations for that aircraft prescribed by the certificating authority.

2) Title 14 CFR § 91.9(b) prohibits operation of a U.S.-registered aircraft requiring an Aircraft Flight Manual (AFM) or Rotorcraft Flight Manual (RFM) unless it has on board a current and approved AFM or RFM or approved manual material, markings, and placards containing each operating limitation prescribed for that aircraft.

5-440 DISTANCE MEASURING EQUIPMENT (DME) ARC APPROACHES. DME arc transition flightpaths may be used during approach and departure procedures. While the technique of arc flying is uncomplicated, it may cause considerable concern if an instrument pilot's first exposure to this type of approach is encountered during actual IFR conditions. Therefore, the following should be considered:

A. Obstacle Clearance. In addition to difficulties that may be experienced when maintaining the prescribed arc, there is a general misunderstanding that obstacle clearance is provided throughout the entire sector containing the arc at the published arc altitude. For example, the published altitude along a prescribed arc may be 2,500 feet. This provides obstacle clearance of at least 1,000 feet for a 4-mile distance from either side of the center line of the prescribed course.

B. Departing the Arc. Pilots should be cautioned that obstacle clearance to the final approach fix (FAF) is not guaranteed if the aircraft departs the arc at other than the prescribed position, even if the published arc altitude is maintained.

C. Information Dissemination. Evaluators should ensure that the subject of flying DME arcs is brought to the attention of other evaluators, pilot schools, flight instructors, instrument rated pilots, and air taxi operators to provide an awareness of the need to become familiar with the use of this procedure.

5-441 USE OF NONAPPROVED IAPs FOR TRAINING AND CERTIFICATION. The use of any IAP not approved under 14 CFR part 97 for a certification practical test is not authorized. Nonapproved approach procedures do not meet the instrument instruction requirements of 14 CFR § 61.65(d) and may not be used to satisfy the requirements of any portion of an instrument rating practical test. Examples of nonapproved approach procedures would be substituting a published approach procedure for one very high frequency omnidirectional range station (VOR) at a different VOR location or using a published non-directional radio beacon (NDB) approach procedure at a commercial radio station.

5-442 PARTIAL PANEL SKILLS AND EARLY DETECTION OF INSTRUMENT FAILURE. Aircraft accidents have occurred during IFR operations in IMC when the failure or malfunction of certain instruments or equipment and the pilot's lack of competency in instrument partial panel skills may have contributed to the pilot's loss of control and the resulting accident.

A. Partial Panel Skills. Since many of the single- and twin-engine aircraft operated in IMC are not equipped with dual, independent, gyroscopic heading or attitude indicators, it is imperative that the pilot maintain proficiency in partial panel instrument skills. In addition, the pilot should have an adequate knowledge of the proper functioning of all gyroscopic instrumentation, pressure/vacuum systems, and associated electronic equipment to preclude operating in IMC with inoperative instruments or equipment.

B. Certification Standards. Current certification standards as outlined in the ACS or PTS, as appropriate, and pertinent rules of 14 CFR part 61 describe the level of instrument competency that should be achieved during pilot training and which must be demonstrated during certification testing.

C. ASI Responsibilities. Each ASI should take the necessary action to ensure the following:

1) The matter of partial panel skills is brought to the attention of all flight and ground instructors and Designated Pilot Examiners (DPE) within the Flight Standards District Office's (FSDO) jurisdiction;

2) Title 14 CFR part 141-approved instrument or instrument-related ground or flight school training course outlines (TCO) are reviewed and revised, as necessary, to ensure proper emphasis on the subject areas described herein;

3) ASIs should emphasize pilot competency in partial panel instrument skills during the training and testing of airmen in simulated emergency operations, particularly in aircraft that do not have redundant or dual, independently powered flight instrumentation systems;

4) ASIs should emphasize the early detection of malfunction or failure of either pressure/vacuum or electronic flight instruments or systems, particularly when the failure or malfunction would endanger the safety of the aircraft; and

5) Evaluators conducting IPCs under 14 CFR § 61.57 should ensure that the pilot performing the check demonstrates an accepted level of competency in partial panel skills.

5-443 REQUIREMENT TO DEMONSTRATE GPS APPROACH PROFICIENCY ON A PRACTICAL TEST. If the practical test is conducted in an aircraft, and that aircraft has an operable and installed GPS receiver, an evaluator may require an applicant to demonstrate GPS approach proficiency. If the applicant has contracted for training in an approved training course that includes GPS training and a GPS receiver is installed in the aircraft, simulator, or FTD, as appropriate, and the aircraft, simulator, or FTD used for the practical test has the GPS receiver installed, an evaluator must require an applicant to demonstrate GPS approach proficiency.

5-444 PREREQUISITES AND COORDINATION REQUIREMENTS.

A. Prerequisites. This task requires knowledge of 14 CFR part 61 subpart B, the applicable PTS or ACS, FAA policies, and qualification as an ASI (Operations).

B. Coordination. This task may require coordination with the airworthiness unit and with the Airmen Certification Branch (AFB-720).

5-445 REFERENCES, FORMS, AND JOB AIDS.

A. References (current editions):

- Title 14 CFR Parts 1, 3 Subpart C, 61, 91, 97, 141, and 187 Appendix A.
- Instrument Rating ACS or PTS, as appropriate.
- FAA-H-8083-15, Instrument Flying Handbook.
- SAS Resource Guide (SRG), as appropriate.
- Aeronautical Information Manual (AIM).

B. Forms:

- FAA Form 8060-4, Temporary Airman Certificate.
- FAA Form 8060-5, Notice of Disapproval of Application (see Figure 5-33).
- FAA Form 8710-1, Airman Certificate and/or Rating Application.

C. Job Aids. Sample letters and figures.

5-446 PROCEDURES.

A. Schedule Appointment. Advise the applicant to bring the following documents to the appointment:

1) FAA Form 8710-1 must be completed in ink or typed and signed by the applicant. FAA Form 8710-1 may also be completed and processed electronically on the Integrated Airmen Certification and Rating Application (IACRA) website at https://iacra.faa.gov/.

a) The applicant must complete Sections I, II, III, IV, and V. Section I must have Parts A through O completed in their entirety. If a flight test is administered, Section IIA(1) must indicate the aircraft used during the flight test and the "Total time" in (2)a. (If tested in a simulator, this section can be omitted.) The aircraft listed must match the aircraft listed on the reverse side of the application. Section IIC must be completed when the applicant graduated from an FAA-approved course. Ensure the applicant has given the school name and location (city and state). If the application is a 14 CFR § 61.75 applicant and is adding instrument "U.S. TEST PASSED," Section IID must also be completed if the application is based off the airman's foreign license. In addition, the airman must have had their foreign license verified for validity prior to making application. The verification letter must be attached to the application. The applicant must ensure they complete Section III, Record of Pilot Time. As a special emphasis item, the evaluator must review the applicant's aeronautical experience on FAA Form 8710-1 and in the applicant's logbook/training record to ensure compliance with the appropriate aeronautical experience requirements for the certificate and/or rating sought. Section IV must be answered "Yes" or "No" if a certification test was administered. If "Yes," ensure the airman's Notice of Disapproval is included with the approved application. If the applicant has lost the Notice of Disapproval, attach a statement to that effect. Section V must be signed and dated by the applicant.

b) In Section III on FAA Form 8710-1, the applicant must list at least the aeronautical experience required for the airman certificate and rating sought. Graduates of 14 CFR part 141 pilot schools or 14 CFR part 142 training centers must provide their aeronautical experience in Section III, even though the graduation certificate is evidence of having completed the course of training.

c) If aeronautical experience has no bearing on the airman certification action being sought, it is not necessary for an applicant to complete Section III. For example, flight instructor recency applications, flight instructor reinstatement applications, ground instructor qualification applications, and pilot type rating applications would be examples for which aeronautical experience would not have a bearing on the airman certification action; thus, the applicant would not be required to complete Section III of the application. However, all applicants are encouraged to complete Section III because it remains on file with the FAA and can be used to substantiate past aeronautical experience in the case of a lost logbook.

2) The appropriate pilot certificate and aircraft rating per 14 CFR § 61.65(a)(1).

3) A current FAA Form 8500-9, Medical Certificate ___ Class, third-class medical certificate, and Statement of Demonstrated Ability (SODA) (if applicable) or, if operating under BasicMed in lieu of possessing a valid third-class medical certificate, a valid U.S. driver's license as well as a current Certificate of Completion from an authorized BasicMed medical education course.

4) An instrument knowledge test report for the applicable category of aircraft (initial instrument rating only).

5) A school graduation certificate (if required by 14 CFR § 61.71) issued within 60 days prior to the date of the exam.

6) Personal logbooks or other records substantiating the flight experience shown on the application form.

7) An acceptable form of photo identification.

8) The aircraft maintenance records.

9) The aircraft Airworthiness Certificate.

10) The aircraft registration.

11) A view-limiting device.

12) The AFM.

13) The Federal Communications Commission (FCC) aircraft station license documents, if applicable.

14) The applicant must provide FAA Form 8060-5 or a Letter of Discontinuance to receive credit for practical test elements found to be satisfactory from a previously administered practical test conducted within the previous 60 days, as applicable.

B. Applicant Arrives for Appointment.

1) Collect the documents listed above.

2) An ASI evaluator will open an activity record and complete the record in SAS AR.

C. Review Application. Verify that the information on FAA Form 8710-1 is accurate, legible, and complete.

1) In Section I, ensure that the applicant has checked the box labeled “Instrument.”

2) Check the application for accuracy, using the instructions on the form attachment.

3) Check to make sure the flight instructor has signed the reverse side of the application no more than 60 days before the application.

4) The FAA Form 8710-1 application must be completed in ink or typed and signed by the applicant. Per 14 CFR § 61.39(a)(7), the applicant must complete Section III on the FAA Form 8710-1 application. As a special emphasis item, the evaluator must review the applicant’s aeronautical experience recorded on FAA Form 8710-1 and in the applicant’s logbook/training record to ensure compliance with the appropriate aeronautical experience requirements for the certificate and/or rating sought.

D. Verify Applicant’s Identity. Inspect acceptable forms of identification to establish the applicant’s identity (see Volume 5, Chapter 1, Section 3). Compare the identification with the personal information provided on FAA Form 8710-1.

1) If the applicant’s identity can be verified, proceed with certification.

2) If the applicant’s identity cannot be verified because of lack of identification or inadequate identification, explain what types of identification are acceptable. Instruct the applicant to return with appropriate identification to reapply.

3) If the applicant’s identity appears to be different from the information supplied on FAA Form 8710-1 or it appears that an attempt at falsification has been made, do not continue testing (see Volume 5, Chapter 1, Section 3, Paragraph 5-55, Verification of Applicant’s Identity, for further information).

E. Establish Eligibility.

1) Determine if the applicant meets the specific eligibility, knowledge, and experience requirements for an instrument rating certification (refer to 14 CFR § 61.65).

a) Verify that the applicant for an instrument rating holds the appropriate pilot certificate and aircraft ratings per 14 CFR § 61.65(a)(1).

b) If the applicant is not a graduate of an approved school, have the applicant establish flight experience in accordance with 14 CFR § 61.65 in an acceptable logbook or other reliable record that conforms to 14 CFR § 61.51 requirements.

c) Except for 14 CFR part 141 graduates (refer to 14 CFR § 61.71(a)), check the record of flight time in Section III of the application to determine if the applicant has at least the minimum flight experience required in the training course.

d) Verify that the applicant's instrument instruction hours received in a full flight simulator (FFS) or FTD do not exceed the creditable hours permitted by the regulations (if acceptable as instrument time under 14 CFR § 61.65). Check that the hours of FTD time (if acceptable as instrument time under 14 CFR § 61.65) has been logged specifically as FTD instruction received.

e) Verify that the flight simulation training device (FSTD) time is certified by an authorized instructor. Credit all allowed FSTD time toward total pilot time.

f) If an Aviation Training Device (ATD) has been used for the training for an instrument rating, only the maximum creditable time can be used. The time must be certified by an authorized instructor. The ATD must be approved and qualified in accordance with AC 61-136, FAA Approval of Aviation Training Devices and Their Use for Training and Experience.

g) Ensure that the applicant holds at least a current third-class medical certificate or, if operating under BasicMed in lieu of possessing a valid third-class medical certificate, a valid U.S. driver's license as well as a current Certificate of Completion from an authorized BasicMed medical education course.

h) If the applicant holds an instrument rating and is applying for an additional instrument rating in another category of aircraft, check to see if the applicant meets the experience requirements of 14 CFR § 61.65.

i) If the applicant has checked the "Yes" box of Section IV on FAA Form 8710-1, verify that the applicant meets the requirements of 14 CFR § 61.49. If the applicant has failed the instrument rating practical test, make sure the applicant submits a new FAA Form 8710-1 that has been signed by that applicant's instructor and make sure the applicant has received additional training from that instructor before conducting the retest.

j) Determine if the applicant graduated from an FAA-approved commercial/instrument pilot certification course or instrument rating test course within the preceding 60 days. If so, have the applicant present the appropriate graduation certificate required by 14 CFR § 61.71. Otherwise, the applicant must meet the requirements of 14 CFR § 61.65.

NOTE: Examine the applicant's instrument knowledge test report or instrument test report from an approved school with knowledge test authority, as applicable. Verify that the applicant has passed the instrument knowledge test appropriate to the category of aircraft for which the instrument rating is sought. If the applicant already holds an instrument rating, a knowledge test is not required.

2) Check the reverse side of the FAA Form 8710-1 for the instructor's signature in the "Instructor Action" section. Verify that the applicant has received instrument instruction in the last 2 calendar months from a certificated flight instructor—instrument (CFII).

3) Prior to conducting the practical test, the evaluator, or an Airworthiness ASI, shall review the applicant's aircraft maintenance records, aircraft logbooks, Airworthiness Certificate, and aircraft registration to determine if the aircraft is eligible and suitable for this practical test. After review, return the documents to the applicant.

a) During the practical test, the applicant will review the aircraft maintenance records, logbooks, Airworthiness Certificate, and aircraft registration for the purpose of demonstrating aeronautical knowledge about how to determine whether an aircraft is airworthy.

b) An aircraft provided for an instrument rating practical test must have engine power controls and flight controls that are easily reached and operable in a conventional manner by both pilots. A throw-over yoke is not acceptable for the practical test.

F. Discrepancies. If a discrepancy that cannot be immediately corrected exists in any of the documents, return the application and all submitted documents to the applicant. Inform the applicant of the reasons for ineligibility and explain how the applicant may correct the discrepancies.

G. Conduct Practical Test. After determining that the applicant is eligible and meets all prerequisites for the instrument rating, conduct the practical test.

NOTE: Conduct the appropriate pretest, preflight, and postflight briefings as required by Volume 5, Chapter 2, Section 1.

1) Use the procedures and maneuvers outlined in the Instrument Rating PTS or ACS, as appropriate, for the appropriate category and class of aircraft.

2) An applicant for retesting typically receives credit for those pilot operations successfully completed on the previous practical examination(s). However, an evaluator will reexamine the applicant on all pilot operations required for a pilot certificate or rating after more than 60 days have elapsed, or when the evaluator has reason to doubt the applicant's competency in any areas for which credit has previously been given.

3) If the practical test is not completed for reasons other than unsatisfactory performance, issue the applicant a Letter of Discontinuance (see Figure 5-32, Sample Letter of Discontinuance). Return the application and any submitted documents to the applicant.

4) Close SAS AR, as appropriate.

H. Unsatisfactory Performance. If the applicant did not meet the applicable standards for the certificate sought, inform the applicant of the reasons for the unsatisfactory performance.

1) Prepare FAA Form 8060-5 in accordance with the guidance in Volume 5, Chapter 1, Section 6 (see Figure 5-33, Sample FAA Form 8060-5, Notice of Disapproval of Application, Instrument Rating).

2) List the areas of operation that were unsatisfactory:

- If specific procedures and maneuvers need to be repeated, record them on FAA Form 8060-5.
- Record the number of practical test failures on FAA Form 8060-5. Give a copy of this form to the applicant.

3) As appropriate, mail the completed certification file to the managing FSDO no later than 7 calendar days after the completion of the test. Forward the completed file to AFB-720. IACRA files may be sent directly to AFB-720. Return all other submitted documents to the applicant.

4) As appropriate, sign an entry in the applicant's records after the practical test. That entry must show the type of test, the duration of the flight portion, the unsatisfactory outcome of the test, and the evaluator's designation number.

I. Satisfactory Performance. Issue FAA Form 8060-4 when the applicant has met all requirements for the rating sought, including all of the applicant's previous ratings and the appropriate instrument rating.

1) Prepare the certificate in duplicate per Volume 5, Chapter 1, Section 5.

a) Indicate the appropriate instrument rating on the certificate:

- "INSTRUMENT—HELICOPTER" for applicants who have met the requirements in a helicopter;
- "INSTRUMENT—AIRPLANE" for applicants who have met the requirements in an airplane; or
- "INSTRUMENT—POWERED-LIFT" for applicants who have met the requirements in a powered-lift.

b) Enter any appropriate limitation(s) if the applicant holds an airplane multiengine class rating (land or sea) and completes the practical test in a single-engine airplane or in a multiengine airplane limited to center thrust. If an instrument rating is added to a certificate using a single-engine airplane and the applicant has a multiengine rating (land or sea), enter a VFR limitation for those multiengine privileges.

2) If the pilot certificate is issued in a foreign country, refer to 14 CFR § 61.13(a) and 14 CFR part 187 appendix A.

3) Complete the appropriate certification section and sign the reverse side of FAA Form 8710-1.

4) Verify that all information on FAA Form 8060-4 is correct. Sign FAA Form 8060-4 and direct the applicant to sign on line VII.

5) As appropriate, mail the completed certification file to the managing FSDO no later than 7 calendar days after the completion of the test. Forward the completed file to AFB-720. IACRA automatically sends the file to AFB-720.

6) Return all submitted documents not forwarded to AFB-720 to the applicant.

7) As appropriate, sign an entry in the applicant's records after the practical test. That entry must show the type of test, the duration of the flight portion, the successful outcome of the test, and the evaluator's designation number.

5-447 TASK OUTCOMES. Completion of this task results in the issuance of one of the following:

- Temporary Airman Certificate,
- Notice of Disapproval of Application, or
- Letter of Discontinuance.

5-448 FUTURE ACTIVITIES:

- Pilots may return for another grade of airman certificate.
- Pilots may return for an additional category or class rating.

FAA Letterhead

[*Date*]

[*Applicant's name and address*]

Dear [*Applicant's Name*]:

On this date, you successfully completed the ground portion of the practical test for a [*indicate grade*] certificate with an [*indicate category*] and [*indicate class*] class rating. The practical test was discontinued because of [*indicate reason*].

If application is made by [*indicate date 60 days from date of letter*], this letter may be used to show the following portions of the practical test which have been completed satisfactorily.

[*Indicate areas of operation completed on the test.*]

After [*indicate expiration date*], you must repeat the entire practical test. This letter does not extend the expiration date as shown on the knowledge test results, your graduation certificate, medical certificate, or required endorsements.

Sincerely,

[*Signature of inspector or examiner conducting practical certification test of examiner candidate*]
